

AX6300S Series

1. Overview

The ALAXALA AX6300S series of multi-layer switches offers the following two models:

AX6304S

AX6308S

1.1 Product concept

The AX6300S series features multi-layer switches that enable "guaranteed networks" as well as the following functionality.

1. Large capacity and compact design

The AX6300S series features entry-class switches that have been made more compact by moving the packet forwarding functionality to the shared section, enabling enterprises to implement many 1-gigabit and 10-gigabit lines. Using the AX6300S series together with the compact AX2400S, AX2500S, or AX3600S series enables a high-performance network at a low cost.

2. High reliability and availability

The AX6300S series contains hardware and software that guarantees high reliability and availability, as already demonstrated in the AX7800R, AX7800S, and AX5400S series. In addition, functionality that improves reliability, such as link aggregation, graceful restart, GSRP, and the Autonomous Extensible Ring Protocol, have been added to the switches to construct highly reliable networks.

3. Operation and management cost reduction

By integrating multiple virtual service networks within one physical network, network partitions can be created to reduce building and operating costs.

4. Environmentally friendly design

The intensive engine system in the AX6300S series reduces the number of ASICs used per switch, thus reducing power consumption for the all switches in a network. The AX6300S series supports a power saving mode in which both normal power consumption mode and switching performance are suppressed.

5. Low cost

The AX6300S series lowers the cost per port by achieving a high port density for both 1-gigabit Ethernet and 10-gigabit Ethernet ports with a maximum switching capacity of 192 Gbit/s.

- 10-gigabit Ethernet: Maximum of 64 ports (AX6308S)
- 1-gigabit Ethernet: Maximum of 192 ports (AX6308S)
- 6. High level of security

The AX6300S series supports IEEE 802.1X and Web authentication. In combination with MAC VLANs, the AX6300S series also offers highly secure VLANs in dynamically changing environments. Through MAC-based authentication, users can also authenticate printers and other switches.

Unicast Reverse Path Forwarding (uRPF) can prevent unauthorized traffic such as spoofing.

1.2 Usage examples

The AX6300S series features multi-layer, enterprise-oriented gigabit switches, which prioritize the efficient handling of 1-gigabit and 10-gigabit lines, making it possible to achieve a high cost-performance ratio, while also incorporating the reliability and functionality inherit in the carrier-class, large-capacity AX7800S series.

Example of using AX6300S series switches as core switches for a campus network

Sw	itch usage	Points
Large-scale independent network	High-reliability Layer 3 switch compatible with Ring Protocol	 - 10-gigabit dark fiber - Stable operation and rapid switchover if a failure occurs - Quick and reliable switching using the simple Ring Protocol
Enterprise LAN (Campus network)	Core switch	 Stable network with enhanced high-availability functionality Prevention of problems, such as virus infection and information leaks, by using authentication and quarantines Excellent cost performance, which helps to transition to 10 gigabit Power saving functionality for public offices
Service provider network	User accommodation Layer 3 switch, FTTH Layer 2 core switch, WAN Ethernet core Layer 2 switch	 High-performance 10-gigabit network to handle increases in traffic Stable operation and rapid switchover if a failure occurs Detection and prevention of unauthorized traffic IPv4/IPv6 dual stacking Low power consumption
Datacenter	External connections	 Space saving by packing ports in a small space Burst data protection Low power consumption

2. Features

2.1 Features of the AX6300S series

(1) Unified architecture across the series

- An intensive engine system concentrates packet forwarding functionality in the shared section of the switch.
- Unique and cutting-edge ASICs provide large volume hardware packet transfer, equivalent to that of the AX7800S series, and the intensive engine system reduces the number of ASICs required, which ultimately reduces the price of the switch.
- An integrate module (MSU) consisting of switch control units and packet processing units achieves cost-efficient design. Two types of intensive engines with different table sizes are lined up.
- MSU upgrades allow for switch configurations with enhanced performance. This increases divertibility of chassis/network interface functionality (NIF), thus reducing investment cost.

(2) Power saving

- Adopting an intensive engine system reduces the number of ASICs used per switch, which in turn reduces the power consumed by the all switches in a network.
- Both normal power consumption mode and power-saving mode are available. Power-saving mode improves bandwidth aggregation efficiency by allowing the ASICs to be operated at lower operating frequencies. Even in power-saving mode, all functionality except the switching-capacity suppression functionality can be used.

(3) High quality, reliability, and availability

- High-quality devices
 - High reliability through carefully selected parts and strict design and inspection requirements
 - Stable routing guaranteed by inheriting the software for the AX5400S, AX7800S, and AX7800R series, which have a proven track record on carrier networks
- High level of failure tolerance
 - All major components include a failure detection mechanism.
 - Redundancy within switches for power supplies and MSUs
 - Link aggregation across slots allows redundancy of interface parts.
 - Hot standby redundancy is supported for MSUs to minimize downtime during failures.
- Rapid re-routing
 - The hot standby mechanism delivers rapid re-routing for Layers 2 and 3.
 - (Layer 2: GSRP, Layer 3: GSRP and VRRP)
 - Link aggregation (IEEE 802.3ad) provides link redundancy at the Layer 2 level.
 - By making specified remote routes reachable, static/VRRP polling can provide dynamic re-routing.
 - The implementation of the Autonomous Extensible Ring Protocol supports diverse ring network configurations. With this functionality, rapid and stable hardware-based Layer 2 redundancy is possible.
 - OSPF balances loads by distributing IP-level traffic and avoiding path failures.
- Layer 2 loop avoidance
 - UDLD prevents spanning tree loops and link aggregation frame loss.
 - The Layer 2 loop detection functionality detects improperly connected devices on the network, which helps prevent loops.
- Prevents failure propagation
 - Normal user traffic can be reduced by minimizing broadcast traffic.
 - (Storm control functionality)
- Rapid rebooting
 - Graceful restarts can be performed, minimizing the time needed to resume communications during a reboot.
- Online maintenance and upgrades
 - Partial reboots allow for uninterrupted user operation whenever a module is added or a configuration is changed.
 - Modules, power supplies, and fans can be added or replaced with the power on, increasing maintainability during operation.

All Rights Reserved, Copyright (C), 2006, 2012, ALAXALA Networks, Corp.

- Boards can be replaced with the power on and without using commands.
- Software can be updated without needing to stop services.
- (4) Industry-leading 10-gigabit Ethernet
 - High-density 10-gigabit Ethernet
 - 64 10-gigabit Ethernet ports are provided on every switch. (AX6308S model, XFP support module)
 - Large number of 1-gigabit Ethernet ports
 - 192 1000BASE-X ports are provided on every switch. (AX6308S model, SFP support model)
 - 192 10BASE-T/100BASE-TX/1000BASE-T ports are provided on every switch. (AX6308S model)
- (5) Robust security
 - Advanced and precise packet filtering
 - Hardware-based advanced filtering
 - Partial and multiple conditions can be specified for Layer 2, 3, and 4 headers.
 - User authentication based on IEEE 802.1X, Web authentication, and MAC VLANs (VLAN access is restricted via MAC addresses) allows for highly secure VLANs to exist in an environment like a wireless LAN office, where user needs often change.
 - Devices such as printers can be authenticated by using MAC-based authentication.
 - uRPF prevents IP address spoofing.
 - · Unauthorized DHCP servers and terminals with fixed IP addresses are excluded from networks.
 - The AX6300S series provides strong security measures via functionality such as DHCP snooping, which eliminates unauthorized DHCP servers and terminals with fixed IP addresses.

(6) Network partition support

- · Horizontal and vertical network integration reduces costs.
 - By using the VRF functionality, which virtually combines logically separated switches into a single switch, networks that were once physically separate entities can exist within one physical network.
 - Networks can be easily constructed and managed by placing Layer 3 switches at a central location and then connecting them to Layer 2 switches at individual offices and sites.

(7) Industry-leading IPv6 performance and functionality

- IPv6 routing that can take advantage of all the bandwidth of 10-gigabit Ethernet lines
- A variety of IPv6 routing protocols (static, RIPng, OSPFv3, BGP4+, policy-based routing, PIM, and MLDv2) allow diverse, flexible IPv6 networks to be built.
- Network management (SNMP over IPv6) and authentication management (RADIUS over IPv6) in IPv6-only environments are supported.
- Detailed conditions other than IPv6 addresses can be used for filtered searches to enhance IPv6 network security.
- IPv6 Ready Logo Ph.2
 - In addition to phase 1 features, phase 2 features are supported, to provide a more practical IPv6 that more strictly conforms to specifications.

(8) Enhanced IPv4 routing protocols supporting a variety of network configurations

- You can choose from a variety of routing protocols according to the network type and size.
 - Static, RIP, OSPF, BGP4, policy routing, PIM-SM/SSM, and IGMPv3
- Policy-based routing
 - Supports policy-based routing in which optimal routes are selected according to the status of a forwarding destination.

(9) Hardware-based, advanced QoS delivered via Ethernet

- Detailed specification of parameters is possible, and precise QoS control prevents congestion of important user communication (packets and frames).
- Extensible QoS for a wide range of applications, from enterprises to carriers
- Multistage shaping functionality for maximum and minimum bandwidth, etc. (provided by the hierarchical shaper NIF).

All Rights Reserved, Copyright (C), 2006, 2012, ALAXALA Networks, Corp.

(10) Excellent support for Layer 2 functionality

- Various VLAN functionalities
 - Equipped with port VLAN, protocol VLAN, and MAC VLAN functionality
 - Flexible VLAN configurations that can be adapted to your requirements
- Spanning Tree Protocol
 - Supports the Spanning Tree Protocol (IEEE 802.1D), the Rapid Spanning Tree Protocol (IEEE 802.1w), PVST+, and Multiple Spanning Tree (IEEE 802.1s)
- Layer 2 Virtual Private Network (L2-VPN) using VLAN tunneling
- Policy-based switching
 - Supports policy-based switching, in which Layer 2 forwarding is performed for a destination interface specified by users, instead of the routing information registered in the MAC address table.
 - Selects optimal routes according to the status of a forwarding destination.

(11) Compact design

- The power supply is inserted into the rear panel with a low profile, allowing switches to be easily and efficiently placed in racks.
- (12) Excellent network management, maintenance, and operation
 - CFM (Connectivity Fault Management) (Ether OAM)
 - Connectivity monitoring and failure management are available at the Layer 2 level by performing continuity checks (CC), loopbacks, and linktraces.
 - In addition to the basic MIB-II, many other MIBs, including IPv6-MIB and RMON, are supported.
 - The port mirroring functionality allows you to monitor and analyze actual user traffic without affecting user communications. Network failures can be isolated. In addition, the sampling mirroring process, which samples target packets, allows you to monitor 1-gigabit and 10-gigabit Ethernet connections using a low-performance, general-purpose computer.
 - Statistics can be collected for specific flows/ports and VLANs for any line speed, ranging from 10 Mbit/s to 10 Gbit/s.
 - An ALAXALA CLI, which is the same for all AX series products, is used. This helps reduce the costs of training maintenance personnel.

3. Specifications

3.1 Specifications of the AX6300S series of switches

	Spec	cifications	AX6304S	AX6308S

Note 1: An optional license (OP-BGP) is required.

Note 2: Encrypted communication using Secure Socket Layer (SSL) is also available.

Note 3: This functionality cannot be used in combination with VRF.

Note 4: An optional license (OP-NPAR) is required. Note 5: Uplink redundancy is supported in the AX1240S, AX1250S, AX2400S, AX2500S, AX3600S, and AX3800S series. Note 6: Only supported by the NH1G-24S.

Note 7: An optional license (OP-DH6R) is required. Note 8: An optional license (OP-MBSE) is required.

Note 9: MSU-1B1 must be installed.

4. Ordering Information

4.1 AX6300S series

No.	Model name	Abbreviated name	Basic specifications			
	LAN Switch					
1	AX-6300-S04X	AX6304S	Four-slot chassis for AX6304S (AC) <includes following="" products="" the=""> - Two blank panels (BPNL-PS11) for the AC power supply units - One blank panel (BPNL-SU11) for the MSU, CSU, and BSU of the AX6300S, AX6600S, and AX6700S series - Three blank panels (BPNL-NF11) for single-size NIFs and AX6708S BCUs - Two fan units for the AX6300S, AX6600S, and AX6700S series</includes>			
2	AX-6300-S08X	AX6308S	Eight-slot chassis for AX6308S (AC) <includes following="" products="" the=""> - Four blank panels (BPNL-PS11) for the AC power supply units - One blank panel (BPNL-SU11) for MSU, CSU, and BSU of the AX6300S, AX6600S, and AX6700S series - Seven blank panels (BPNL-NF11) for single-size NIFs and AX6708S BCUs - Three fan units for the AX6300S, AX6600S, and AX6700S series - Direct for the AX6300S, AX6600S, and AX6700S series</includes>			
1		MOLT 1 4 1	Basic Control Section			
1	AX-F6300-51A1X	MSU-1A1	Standard management switching unit for AX6304S and AX6308S (large-capacity version with built-in flash memory) - MAC entries = 48 K, IPv4 unicast entries = 64 K, Amount of memory = 1024 MB			
2	AX-F6300-51B1X	MSU-1B1	Extended management switching unit for AX6304S and AX6308S (large-capacity version with built-in flash memory) - MAC entries = 120 K, IPv4 unicast entries = 208 K, Amount of memory = 2048 MB			
			Power Supply Unit			
1	AX-F6300-1A11X	PS-A11	AC power supply unit for the AX6300S, AX6600S, and AX6700S series (100/200 V AC)			
			Common Options			
1	AX-F0110-SD1GX	SD1G	1 GB SD memory card (Note 4)			
2	AX-F6300-CBR11X	BRK-11	Rack mounting bracket for AX6304S and AX6604S (Note 1)			
3	AX-F6300-CBR12X AX-F6300-CBR14X	BRK-12 BRK-14	Rack mounting bracket for AX6308S and AX6608S (Note 1) Support bracket for AX6304S and AX6604S (Note 2)			
4	AA-10500-CBR14A	DKK-14	Network Interface Unit			
_1	AX-F6300-713TX	NH1G-24T	For the AX6300S series Ethernet LAN with 24 ports for 10BASE-T/100BASE-TX/1000BASE-T - RJ-45 interface - Single size - Equipped with shaper functionality - Equipped with priority control functionality - Supports power saving mode Supported in Ver.10.3 and later.			
2	AX-F6300-713SX	NH1G-248	For the AX6300S series Ethernet LAN with 24 ports for 1000BASE-X (SX/SX2/LX/BX/LH) - SFP required separately - Single size - Equipped with shaper functionality - Equipped with priority control functionality - Supports power saving mode - SFP-T can be installed Supported in Ver.10.3 and later.			
3	AX-F6300-722FX	NH10G-4RX	For the AX6300S series Ethernet LAN with 4 ports for 10GBASE-R (SR/LR/ER/ZR) - XFP required separately - Single size - Equipped with the shaper functionality - Equipped with priority control functionality - Supports power saving mode Supported in Ver.10.3 and later.			

		Abbreviated	
No.	Model name	name	Basic specifications
4	AX-F6300-723FX	NH10G-8RX	For the AX6300S series
			Ethernet LAN with 8 ports for 10GBASE-R (SR/LR/ER/ZR)
			- XFP required separately
			- Single size - Equipped with the shaper functionality
			- Equipped with priority control functionality
			- Supports power saving mode
			Supported in Ver.10.3 and later.
			Optical Transceiver
1	AX-F6244-3S1TX	SFP-T	SFP for 10BASE-T/100BASE-TX/1000BASE-T Supported in Ver. 11.1.C and later
2	AX-F6244-3S1SX	SFP-SX	SFP for 1000BASE-SX (MMF: 2 m to 550 m)
3	AX-F6244-3S1S2X	SFP-SX2	SFP for 1000BASE-SX2 (MMF: 2 m to 350 m)
5	MA 10244 50102A	511 5742	Supported in Ver. 10.5 and later
4	AX-F6244-3S1LX	SFP-LX	SFP for 1000BASE-LX (MMF: 2 m to 550 m) (SMF: 2 m to 5 km)
5	AX-F6244-3SB1UX	SFP-BX1U	SFP for 1000BASE-BX10-U (SMF: 0.5 m to 10 km)
			Supported in Ver. 10.5 and later
6	AX-F6244-3SB1DX	SFP-BX1D	SFP for 1000BASE-BX10-D (SMF:0.5 m to 10 km)
7	AX-F6244-3SB4UX	SFP-BX4U	Supported in Ver. 10.5 and later SFP for 1000BASE-BX40-U (SMF: 0.5 m to 40 km)
/	AA-F0244-35D4UA	5FF-DA4U	Supported in Ver. 10.5 and later
8	AX-F6244-3SB4DX	SFP-BX4D	SFP for 1000BASE-BX40-D (SMF: 0.5 m to 40 km)
			Supported in Ver. 10.5 and later
9	AX-F6244-3S1LHX	SFP-LH	SFP for 1000BASE-LH (SMF: 2 m to 70 km)
10	AX-F6244-3X1SX	XFP-SR	XFP for 10GBASE-SR (MMF: 2 m to 300 m)
11	AX-F6244-3X1LX	XFP-LR	XFP for 10GBASE-LR (SMF: 2 m to 10 km)
12	AX-F6244-3X1EX	XFP-ER	XFP for 10GBASE-ER (SMF: 2 m to 40 km)
13	AX-F6244-3X1ZX	XFP-ZR	XFP for 10GBASE-ZR (SMF: 2 m to 80 km)
			Supported in Ver. 10.6 and later
1	AX-F6300-CPS11X	BPNL-PS11	r Maintenance and Configuration Changes Blank panel for power supply units, required for empty slots
2	AX-F6300-CF311X	BPNL-SU11	Blank panel for the MSU/CSU/BSU of the AX6300S, AX6600S, and AX6700S
2	MAT0500 CSCIIX	DITLESCH	series, required for empty slots
3	AX-F6300-CNF11X	BPNL-NF11	Blank panel for single-size NIFs and AX6708S BCU, required for empty slots
4	AX-F6300-CFAN11X	FAN-11	Fan unit for the AX6300S, AX6600S, and AX6700S series
1	AX-P6300-S1X	OS-S	Software Basic software for the AX6300S, AX6600S, and AX6700S series (without SSH
1	1111-1 0500-51A	00-0	support)
			(VLAN, STP, GSRP, IP packet forwarding, static routing, RIP, RIPng, OSPF,
			OSPFv3, IPv4 multicasting, IPv6 multicasting, SNMPv3, and HTTP)
2	AX-P6300-S2X	OS-SE	Basic software for the AX6300S, AX6600S, and AX6700S series (with SSH
			support) (VI AN STD CSDD ID poster forwarding static routing DID DIDng OSDE
			(VLAN, STP, GSRP, IP packet forwarding, static routing, RIP, RIPng, OSPF, OSPFv3, IPv4 multicasting, IPv6 multicasting, SNMPv3, HTTP, SSH, and
			HTTPS)
3	AX-P6300-F1X	OP-BGP	BGP4, BGP4+ license for the AX6300S, AX6600S, and AX6700S series
4	AX-P6300-F3X	OP-NPAR	Network partition license for the AX6300S, AX6600S, and AX6700S series
5	AX-P6300-F4X	OP-MBSE	Supported in Ver. 11.0 and later (Note 3) IPv4 multicasting BSR extended functionality license for the AX6300S,
5	AA-F0300-F4A	OF-MIDSE	AX6600S, and AX6700S series
			Supported in Ver. 11.4.C and later
6	AX-P6300-F9X	OP-DH6R	IPv6 DHCP relay functionality license for the AX6300S, AX6600S, and AX6700S
			series
			Supported in Ver. 11.4 and later

Note 1: The hardware included in the switch chassis uses flat screws to secure the switch front to the rack column. This bracket is

required when you want to place the switch 50 mm back from the rack columns.

Note 2: This bracket does not require guide rails. It can be used in combination with BRK-11.

Note 3: MSU-1B1 must be installed.

Note 4: The software and script are not installed when shipped from the factory.
